

Global Senior Medical Advisor – Neurology Pipeline Projects

We offer an opportunity to join Lundbeck, a leading brain health company, and influence the development strategy for our pipeline projects. The position is based at our headquarters in Copenhagen, reporting to Head of Neurology, Medical Strategy and Communication, Global Medical Affairs.

The Neurology team consists of 6 specialists and one operations manager. The team is responsible for all international medical activities for our therapies, pipeline projects and related disease areas within Neurology.

Your job and key responsibilities

In the position you will be part of setting the strategy for development and scientific communication related to our pipeline projects in Neurology. Your medical expertise and insights into different cross-functional pipeline projects will be critical to progress and expand our pipeline.

- In projects in the early development phase, your input is key for selecting the indication(s) to pursue for further development.
- In projects in later phase of development you will be responsible for the scientific communication strategy and the publication plan.
- In all phases of drug development, it is critical to consult with global medical experts, and you will lead the international meetings with external experts. You will also drive cross-functional workshops to identify key knowledge, evidence and communication gaps that will guide overall project strategy and the following tactical planning.
- In addition, you will also either drive or support the generation of evidence related to patient/caregiver burden and medical environment in the projects that you are assigned to.

We work in multidisciplinary project teams with close cross-functional collaboration.

In your daily work, you will be working closely together with:

- other global functions, including Marketing, Market Access, Clinical Development, Value Evidence (Health Economics & RWE), Patient Insights, Regulatory Affairs, Research and Project Management
- international colleagues working in our affiliates
- internal and external global medical experts in the field

Together with your colleagues working on pipeline projects in Neurology and Psychiatry, you will share experience and expertise to further strengthen our drug development processes and practices.

You are expected to travel about 30 days per year to cover meetings and international congresses.

In your role as a senior medical advisor, it is critical to ensure compliance to industry codes and regulations.

Qualifications

Our preferred candidate has the following qualifications:

- Neurologist with at least 5 years of experience from international pharmaceutical medical affairs and/or clinical development
- Clinical/research experience within neurology, preferably within neurodegenerative or neuroinflammatory diseases

- Solid understanding of the different phases of drug development; Experience with working at the different phases of drug development including early development is an advantage; ability to handle uncertainties related to early drug development
- Strong team player and strategic mindset
- Analytical skills and ability to prioritize effectively in a dynamic and at times hectic environment
- Communicates effectively, being comfortable presenting to small and large audiences
- Solid track record delivering on projects from start to end with focus on deadlines
